R HARTSHORNE, I SABADINI AND E SCHLESINGER Abstract We study the lowest dimensional open case of the question whether every arithmetically Cohen-Macaulay subscheme of \mathbb{P}^n is glicci, that is, whether every zero-scheme in \mathbb{P}^3 is glicci We show that a general set of $n \geq 56$ points in \mathbb{P}^3 admits no strictly descending Gorenstein liaison or

Sabadini and Yuen, 1989; Richards and Hager, 1984; Ricard et al, 1993) Changes in Earth's nonhydrostatic inertia tensor cause motion of the solid Earth with respect to the spin vector until the maximum principal inertia axis (I max) is aligned with the spin vector True polar wander refers to the relative motion between the spin
